## Private Security Industry vows to maintain high standards

### POXCO Conference brings police and PSI on a common platform

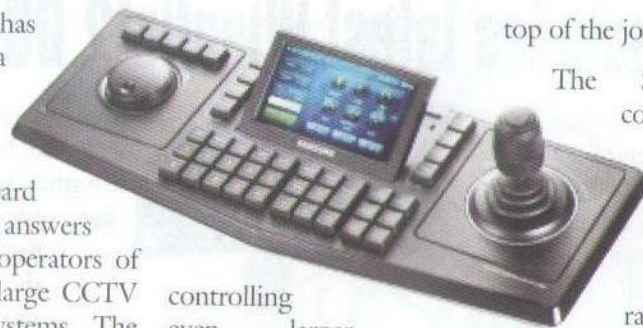

The Private Security Industry has declared that greater security cannot be implemented unless and representatives from Gurgaon police including the Gurgaon Police Commissioner Mr SS of G4S also added that apart from training, security designing was a must and has to be left to agencies would continue to operate and give the entire manned guarding industry a bad name. Police Commissioner Mr Deswal was emphatic that once the end users themselves stopped patronizing the untrained guards, the non-professional agencies would automatically

## Samsung's touch screen CCTV control keyboard

Samsung has designed a touch screen CCTV camera control keyboard that they hope answers the needs of operators of medium and large CCTV surveillance systems. The SPC-6000 is equipped with a 5-inch colour LCD touch screen control panel which makes it easy to navigate menus and can also be used as a monitor to view live or recorded images from individual cameras via a DVR.

A single SPC-600 provides control of up to 255 individual PTZ domes but can also be used in conjunction with up to 16 other SPC-6000 units to provide operators with an extremely effective and easy to use method of centrally

controlling even larger surveillance systems.

Ergonomically designed to make it comfortable to use over long periods, the SPC-600 has a 3-axis joystick and jog shuttle which can be detached and placed on either the left or right hand side of the controller quickly and easily making it suitable for left and right handed operators. The 3-axis joystick, which is particularly useful for precise control of speed domes, has an extra programmable button on

top of the joystick.

The SPC-600 is compatible with all DVRs in the Samsung SRD, SVR and SHR ranges as well as supporting a wide range of devices that use Samsung T/E, Pelco D/P, Panasonic, Vicon, AD, Honeywell, Elmo, Bosch and GE protocols. As is the case with all Samsung CCTV and IP/network security products, the SPC-6000 is offered with full support services from Samsung Techwin Europe Ltd, including free system design, free technical support and a full three-year warranty.

## Lockheed announces wireless perimeter intrusion alarm system

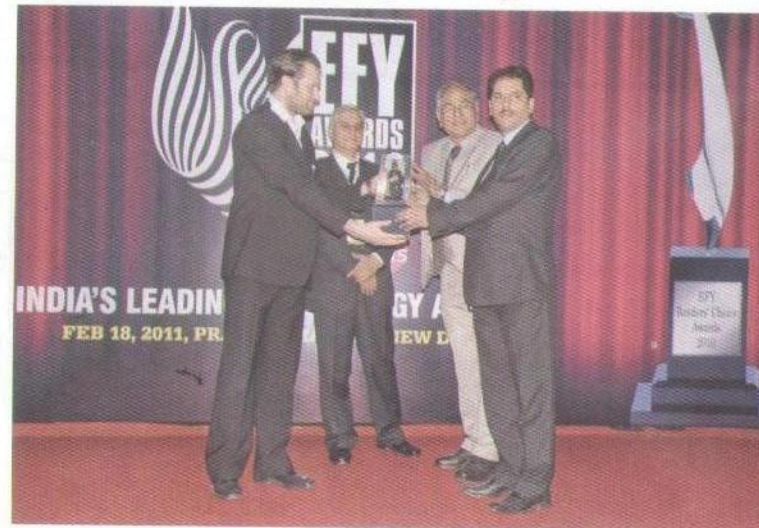

Lockheed Martin has demonstrated a wireless perimeter security system that can detect and verify intrusions designed

company said.

"We developed this system in response to needs articulated by the U.S.

our companies' proprietary technologies resulting in an unprecedented range of new capabilities."

## Sparsh wins the prestigious EFY Award again

Sparsh re-affirmed its leadership position in Indian security market by retaining the "EFY - Electronics For You, Magazine Award 2010" for Best Security System. Sparsh received the award in 2009 as well.

This award is given to the most popular brand of the year as voted by the readers of EFY magazine. This award recognizes Sparsh for its dedication to product innovation, quality, and service. Companies competing for the coveted award included Godrej, Zicom, Alba Systems, Bosch, and Sparsh. Previous winners include Honeywell, Alba, Sony and Zicom.

Previously, Sparsh had been nominated for this award in 2005, 2007 and 2008 and had picked up its first award last year.

"This award is recognition for our initiatives in meeting the unique needs of Indian customers and bringing design and manufacturing capabilities for electronics security products to India. We thank and express gratitude to our valued customers, partners and the industry in general for their continuous support and encouragement", says Sanjeev Sehgal, Founder & MD of Sparsh. Sparsh's mission is to make India a recognized leader in the design and manufacture of

innovative and high quality security devices. In our pursuit towards this mission, we have obtained RoHS, CE, EMC, and FCC certifications for our various product lines. This award recognizes our team's hard work over the years

and provides the right motivation for reaching our mission. Some of our 2009 achievements that have contributed to this award include indigenous development of mid-resolution 480 TVL and hi-resolution 540 TVL cameras, expanding range of offered cameras to 70, and launch of OmniSurv-enabling real-time video surveillance anytime, anywhere including low-bandwidth mobile networks like GPRS. In addition, Sparsh became the first Indian security firm to achieve CE, FCC, TUV EMC and RoHS certification for security cameras".
